

Paul Schlegel

AI & Data-Driven Construction Specialist

Led advanced point cloud registration and BIM integration across multiple construction projects, enhancing prefabrication precision and sustainable timber use. Combined architectural expertise with AI-driven data modelling to streamline workflows and support data-informed decisions in complex job site environments.

PROJECTS

testware.dev

Prompt to workflow app for Digital twins. Expert curated catalog of tools/techniques. AI/RAG based research grounded in truth to make reliable decisions quickly.

SKILLS

Cloud: Cloud Computing · Project Management Software

DataAnalysis: Pandas · TensorFlow · Keras · Deep Learning

Design: CAD / CAM · Building Information Modeling (BIM) · 3D-Laserscan-Registrierung

WORK EXPERIENCE

Digitale Gebäudevermessung

Sep '25 - Present

Paul Schlegel Laserscanning & BIM · Großtalstraße 67,
79117 Freiburg im Breisgau-Ost, Deutschland

Independent laser scanning practice (Kleinunternehmer) focus on-architecture and construction clients.

- Successfully executed point cloud registration processes that improved data alignment accuracy below needed levels, enabling carpenter prefabricate across 5 projects.
- Reverse engineering and heritage documentation for over 20 details
- Over 50 projects scanned.

Volunteer

Oct '23 - Jul '24

Dr. Robert Dyckerhoff Stiftung · Amphoe Mae Sariang, Mae
Hong Son 58110, Thailand

Trying to increase students curiosity of doing stuff instead of dreaming

- Realised sustainable library and teach English or code for up to 100 students.
- Successfully renovated 4 bathrooms, resulting in a increase in student satisfaction and a 25% reduction in cleaning.

Architectural BIM & Site Support

Mar '24 - Aug '25

Eva Schwär Architekturbüro · Hexenloch 1, 78120
Furtwangen im Schwarzwald-Neukirch, Deutschland

- Spearheaded migration of paper-based workflows to a centralized digital cloud, introducing project tracking time and enabling real-time task visibility across 6 construction projects.
- Designed and implemented an open-source LLM-based cloud solution that increased the efficiency of searching internal office information, resulting in the retrieval of documents in under 10 seconds and saving approximately 2 hours of time per week.
- Directed data modeling initiatives to integrate timber components across 6 office projects, improving decision transparency and sustainable material adoption.

EDUCATION

University of Stuttgart | Bachelor of Architecture - BArch
Architecture · Grade: 1 · Graduation: Dec '23

Tomorrow University of Applied Sciences | M.Sc.
Artificial Intelligence, Technology and Sustainability · Graduation: Jan '27
